The Lancet REWARD Campaign

A collaborative project whereby all involved in biomedical research can critically examine the research processes to maximise the value of research for the health of all peoples worldwide.

REWARD

Priorities | Design conduct analysis | Regulation & management | Accessibility | Complete & usable reporting | Action & recommendations

It has been estimated that up to 85% of all investment in biomedical research is wasted. *The Lancet* REWARD (Reduce research Waste And Reward Diligence) Campaign invites all involved in biomedical research to critically examine the research processes to maximise the value of research for the health of all peoples worldwide.

Introduction

Every year, about a third of a trillion dollars (USD) is spent on biomedical research across the world. But there is good evidence showing that much of this investment is wasted because of the way that research priorities are set; the way research is designed, conducted, and analysed; the way research is regulated and managed; the lack of publication of much research; and the poor reporting of research that is published.

What can we do?

Insist on literature search for all research articles

Lancet Research in Context panel

Evidence before this project

What these results add

Clinical implications

What can we do?

Share peer reviews

How many journals allow reviews to be passed on?

To associated journal – cascade?

To another journal with same publisher?

To any other journal?

Definitely do not allow sharing of reviews?
